Subject: RE: PSU Investigation [REDACTED] D1234 Recommendations

Hi Nigel,

I have had the following response from Mark Birch regarding the outstanding recommendation from the [REDACTED] D1234 report. However, the issue may need clarifying as there seems to a conflict between what the report states and what Mark's paperwork states.

- 8.6.1 NTRG stated head support was at times applied in an upright position. This was not as taught. On this occasion control of the head was maintained without bringing the head forward.
- 8.6.2 **Staff should be reminded that the detainee's head should be brought forward as per the standard taught to maintain support of the head.. On reading the UOF reports the Detainees head was controlled in the vehicle in the upright position, which is correct.**

Can you clarify please and advise?

Regards

Graham
