## **APPENDIX B**

# RESEARCH CARRIED OUT BY THE OFFICE FOR NATIONAL STATISTICS INTO PUBLIC PERCEPTIONS OF WHAT DAMAGES FOR NON-PECUNIARY LOSS IN PERSONAL INJURY CASES SHOULD BE

The results of the research are set out on the following pages.

Please note that those who carried out the original analysis and collection of the data bear no responsibility for the further analysis and interpretation of them.

Our interpretation and explanation of the research is at paras 3.42-3.59 and 3.63-3.64 above.

The Tables on pages 116-127 summarise the data included on pages 128-139, and break this down by sex, age and geographical region. Note that these Tables combine the results of the research carried out in September and November 1998.

The most important results for the purposes of this Report are set out in the Total columns of the Tables on pages 116-118. The questions asked on compensation are set out on pages 177-181.

ONS OMNIBUS for the Law Commission

### **ONS Omnibus Survey - Technical Report**

#### 1. The Sample

Interviews are conducted with approximately 1,900 adult individuals (aged 16 or over) in private households in Great Britain each month. The Omnibus Survey uses the Postcode Address File of "small users" as its sampling frame, all private household addresses in Great Britain are included in this frame. A new sample of 100 postal sectors is selected each month and is stratified by: region; the proportion of households renting from local authorities; and the proportion in which the head of household is in Socio-Economic Group 1-5 or 13 (i.e. a professional, employer or manager). The postal sectors are selected with probability proportionate to size and, within each sector, 30 addresses (delivery points) are selected randomly.

If an address contains more than one household, the interviewer uses a standard ONS procedure to randomly select just one household. Within households, with more than one adult member, just one person aged 16 or over is selected with the use of random number tables. The interviewers endeavour to interview that person - proxy interviews are not taken.

### 2. Weighting the data

Weighting factors are applied to Omnibus data to correct for unequal probability of selection caused by interviewing only one adult per household, or restricting the eligibility of the module to certain types of informant. It should be noted that this weighting corrects for unequal probabilities of selection; it does not attempt to correct for any non-response bias.

#### Using weighted data

Within the calculation of the weight the base is scaled back to the unweighted total. If a module of questions applied only to a sub-group of the population, for example eligibility was restricted by age, or the module was asked only in England, the weight for the module is calculated for that sub-group and the base, for the weighted data, scaled back to the unweighted figure.

When conducting statistical significance tests, using weighted data, the unweighted base should be used. For tests on the total (module) population the base shown should be used - because this is the unweighted base. However, if sub-groups of the total (module) population are created, for example sub-groups in terms of sex, age-group, region etc., the base shown is the weighted base for that sub-group - because the weight was generated for the whole (module) population. Therefore, when conducting statistical significance tests on these sub-groups, the unweighted base for the sub-group should be used - this can be found by running tables, etc. without applying the weight - in conjunction with the weighted data.

#### i. Unit of analysis: Household

On occasions, a module may collect information about the household rather than the individual and the appropriate unit of analysis will be the household rather than the individual. For example, the questions might be concerned with details about the accommodation which could be supplied by any adult member of the household. In this case, no weighting is required because the information is collected from every household in the responding sample.

#### ii. Weight A - Unit of analysis: Individual

Because only one household member is interviewed, people in households containing few adults have a better chance of selection than those in households with many. Weight A is applied to correct for this unequal probability, and is calculated by dividing the number of adults in the sampled household by the average number of adults per household. The base is then adjusted back to the number of informants who were interviewed. Weight A is applied to modules which use the individual adult as the unit of analysis.

#### iii. Weight C - Unit of analysis: Head of household or spouse

Sometimes information about the household is required that can only be supplied reliably by the head of household or their spouse/partner. The probability that the selected informant will be eligible for the module will be 2/n or 1/n (where n is the number of adults in the household) : if the Head of Household is married/cohabiting the probability that the selected informant will be eligible is 2/n, if the HoH is not married/cohabiting the probability is 1/n. The weighting factor corrects for unequal probability of selection and then adjusts the base back to that of the actual number of informants that complete the module.

#### iv. Weight D - Unit of analysis: Parents

Some of the data collected is only taken from parents. Weight D takes account of the age range of the children addressed which varies according to the module requirements. For example, if the module was asked only of parents of children aged 5 and under, Weight D would correct for unequal probability of selection of parents of children aged 5 and under.

#### **Effective Sample Size**

This method of sampling and the consequent weighting affect the sampling errors of the survey estimates. The effect can be shown by calculating the Effective Sample Size which gives the size of an equal probability sample which is equivalent in precision to the unequal probability sample actually used. The Effective Sample Size will vary slightly from one month to another with the proportions of interviews in different sized households. On average the Effective Sample Size of the Omnibus Survey is 84% to 86% of the actual sample of individuals, when Weight A is applied. An achieved sample of 2000 individual adults in the Omnibus Survey is equivalent to an equal probability sample of about  $1700^{1}$ .

<sup>&</sup>lt;sup>1</sup> Elliot, D The use of the effective sample size as an aid in designing weighted samples. Survey Methodology Bulletin, January 1990

Where individuals are interviewed as representing their households and no weighting is needed, there is no reduction in precision. Where questions relating to the household are addressed only to the Head of Household (HoH) or the spouse of the HoH and Weight C is applied, the Effective Sample Size is 86% to 87% of the interviewed sample. The proportion of households in which the selected informant is the HoH or spouse has varied between 82% and 95% so the sample size for this kind of module will be about 1665 if the total sample is 2000. The Effective Sample Size will be about 1450.

### 3. Field Work

All interviews are carried out face-to-face by members of the general field force of interviewers trained to carry out ONS surveys. Advance letters are sent to all addresses, prior to the interview, giving a brief account of the survey. The interviewing period starts during the last two weeks of the month and continues into the first week of the following month. Interviewers call at all the selected addresses unless a refusal has been made beforehand in response to the advanced letter. The interviewer makes at least three calls at an address at different times of the day and week before coding the household as a non-contact.

As with all ONS surveys, a quality check on field work is carried out through recall interviews with a proportion of informants to make sure that the interviews actually took place with those informants and that responses to questions are consistent.

## 4. Calculation of Response Rate

The small users' Postcode Address File includes some business addresses and other addresses, such as new and empty properties, at which no private households are living. The expected proportion of such addresses, which are classified as ineligible, is about 11-12%. They are eliminated from the set sample before response rates are calculated.

A responding informant may be ineligible for certain modules and may not have answered every single question.

## 5. Response Rate for September & November 1998 combined

The response rate is calculated as the number of achieved interviews as a percentage of the eligible sample.

The response rate for September & November 1998 was 67% as shown below:

		%
Selected addresses	6,000	100
Ineligible addresses	550	9
Eligible addresses	5,450	
Refusals	1,343	25
Non-Contacts	468	9
Interviews Achieved	3,639	67

## 6. Output contained in the report

## a. Frequency counts

Frequency counts for the classificatory variables and client questions are provided, showing non-response to individual questions (item non-response).

Item non-response occurs for three reasons:

- a. the informant was not eligible for the question and they were routed past the question.
- b. the informant was unable to answer (did not know) the question.
- c. the informant refused to answer the question.

## b. Tables

Each table is based on the sample answering both the client question and the relevant classificatory question so both the base and the percentages in the total column may vary slightly from one table to another. Percentages are rounded to the nearest whole number.

Tables based on questions that allow more than one answer to be given (multiple response questions) contain all the responses given by the respondent. The percentages in the table may therefore add up to more than 100% because informants may give more than one answer.

Some bases within tables are very small. The confidence intervals surrounding percentages calculated on bases of 30 cases or less will be very large and we would advise that such results are reported with a great deal of caution.

## c. Classificatory variables

The module variable names are related to the program question numbers. Module variables are prefixed with M. The classification variables use names. These follow Social Survey Division standards for surveys wherever possible.

Notes on the classificatory variables follow:

## Household:

**REGION** Government Office Regions

- 1 North East Metropolitan
- 2 North East Non Met
- 3 North West Metropolitan
- 4 North West Non Met
- 5 Merseyside
- 6 Yorks and Humberside Metropolitan
- 7 Yorks and Humberside Non Met
- 8 East Midlands
- 9 West Midlands Metropolitan
- 10 West Midlands Non Met
- 11 Eastern Outer Metropolitan
- 12 Eastern Other
- 13 London Inner
- 14 London Outer
- 15 South East Outer Metropolitan
- 16 South East Other
- 17 South West
- 18 Glamorgan and Gwent (Wales I)
- 19 Clwyd, Gwynedd, Dyfed and Powys (Wales II)
- 20 Highland, Grampian and Tayside (Main Scotland I)
- 21 Fife, Central and Lothian (Main Scotland II)
- 22 Glasgow (Main Scotland III)
- 23 Strathclyde not Glasgow (Main Scotland Other)
- 24 Borders and Dumfries and Galloway (Main Scotland IV)

(Region 24 is a very small population and therefore does not appear in the sample every month.)

### **REGIONX** Grouped regions

- 1 The North
- 2 Midlands and East Anglia
- 3 London
- 4 South East
- 5 South West
- 6 Wales
- 7 Scotland

NUMADULT Total number of adults

NUMCHILD Total number of children

- N1TO4 Children 0-4
- N5TO10 Children 5-10
- N11TO15 Children 11-15

NPERSONS Total number of people in the household

## HHTYPB Household Type B (Coded by interviewer)

- 1 One person only
- 2 HoH married cohabiting with dependant child
- 3 HoH married cohabiting no dependant child
- 4 HoH lone parent with dependant child
- 5 HoH lone parent no dependant child
- 6 All others

### HHTYPA Household Type A (Computed)

- 1 1 Adult aged 16 to 64
- 2 1 Adult aged 65 or more
- 3 2 Adults aged 16 to 64
- 4 2 Adults, 1 aged 65 or more
- 5 3 Adults
- 6 1 or 2 child
- 7 3+ children

### HHTYPE Household Type B - grouped

- 1 One person only
- 2 Married cohabiting with dependant child
- 3 Married cohabiting no dependant child
- 4 Lone with dependant child
- 5 All others

(Households are classified in terms of whether they include a dependent child. The dependent child need not be a child of the Head of Household, although they usually will be. If the HoH has non-dependent children in the household who have never married and have no children of their own they will be classified as a lone parent.)

## TENURE Tenure

- 1 Owns outright
- 2 Owns with mortgage
- 3 Part rent mortgage
- 4 Rents Local Authority/New Town etc.
- 5 Rents Housing Association Co-operation
- 6 Rents employer
- 7 Rents other landlord

#### TENGRP Grouped Tenure

- 1 Owns outright
- 2 Owns mortgage
- 3 Rents Local Authority/Housing Association
- 4 Rents privately

## TEN1 Tenure (questionnaire variable)

- 1 Own it outright
- 2 Buying it with the help of a mortgage or loan
- 3 Pay part rent and part mortgage (shared ownership)
- 4 Rent it
- 5 Live here rent free (including rent free in relative's/friend's property: excluding squatting)
- 6 Squatting

- TIED Does the accommodation go with the job of anyone in the household?
  - 1 Yes
  - 2 No

LLORD Who is your landlord?

- 1 the local authority/council/New Town Development/Scottish Homes
- 2 a housing association or co-operative or charitable trust
- 3 employer (organisation) of a household member
- 4 another organisation
- 5 relative/friend (before you lived here) of a household member
- 6 employer (individual) of a household member
- 7 another individual private landlord

FURN Is the accommodation provided:

- 1 furnished
- 2 partly furnished
- 3 unfurnished

CARS Car or van available to household?

- 1 Yes
- 2 No

NUMCAR How many cars and or vans are available to the household?

- CAR Car or van available to the household
  - 1 None
  - 2 One
  - 3 Two
  - 4 Three or more

PAIDJOB Number of members of the household who have a paid job?

## Individual - demographic

RESPSEX Sex of Respondent

Ask always:

# INTRO

The next set of questions is being asked on behalf of the Law Commission.

When a person or an organisation is considered by the courts to be legally responsible for causing someone an injury, they have to pay compensation to the injured person.

The compensation is in two parts.

The first part compensates for any financial loss due to injury; for example, loss of earnings, medical expenses or the cost of long-term care.

The second part compensates for those effects of the injury that cannot be measured precisely, for example pain, worry and no longer being able to enjoy life as much as before the injury.

Ask ALWAYS:

#### INTRO2

I am now going to ask you to read brief descriptions of four cases in which people became eligible for compensation. When you have read the descriptions, I would like you to tell me how much money you think each of the injured people should have been awarded for the second type of compensation.

The first case describes injuries to a young woman which are among the worst that there can be, so it is likely that the amount you suggest for her will be towards the top of your range.

Please remember that this second type of compensation is in addition to the compensation each of these injured people will receive for their financial losses.

SHOWCARD C209.1 TO C209.4

ASK ALWAYS:

#### INTRO3

ASK RESPONDENT TO READ ALL FOUR CASES.

ALL FOUR CASES MUST BE READ BEFORE THE FOLLOWING QUESTIONS ARE ASKED.

IF RESPONDENT SAYS THEY ARE UNABLE TO READ ALL FOUR CASES, AND / OR ASKS FOR HELP IN READING THEM: READ OUT ONLY THE FIRST CASE ASK THE RESPONDENT M209\_1 OPEN A NOTE TO EXPLAIN.

- (1) Respondent read all four cases
- (2) Respondent unable to read all four cases; OPEN A NOTE TO EXPLAIN

ASK ALWAYS:

#### M209 1

#### CASE A - 19 YEAR OLD WOMAN - ROAD TRAFFIC ACCIDENT

(A 16 year old girl suffered permanent paralysis of all four limbs in a road traffic accident. She is now 19. She is expected to live until she is about 46. She needs constant care. She cannot feed herself, nor attend to her bodily functions. She is relatively free from pain and discomfort. She can use her arms to a very limited extent. For example, she can, with great difficulty propel a wheelchair, but only very slowly and for short distances. She will never be able to work, nor to have a family. She is not expected to marry.)

#### **INTERVIEWER ASK:**

[\*] How much money do you think the 19 year old woman in case A should receive to compensate her for things other than her financial loss?

#### 0..99999999

ASK IF: INTRO3 = Readall

#### M209 2

CASE B - 30 YEAR OLD MAN - WORK ACCIDENT

(A man, who is now 30, was injured when he was 21 in an accident at work. He suffered brain damage. Five years after the accident he developed epilepsy, but this is controlled by medication. He needs constant supervision. He has been able to work as a manual labourer, but only with help. He will probably lose this job in the next few years, and is unlikely to get another one. Before the accident he got on well with people, but his personality has changed and he now does not have a social life.)

**INTERVIEWER ASK:** 

[\*] How much money do you think the 30 year old man in case B should receive to compensate him for things other than his financial loss?

0..99999999

ASK 1F: INTRO3 = Readall

# M209\_3

CASE C - 29 YEAR OLD MAN - MEDICAL ACCIDENT

( 26 year old man lost the sight in his right eye as a result of a medical accident. He is now29, and is developing a squint, which may need an operation. He has occasional headaches.He has kept his job, which is reasonably secure. He has had to give up his hobbies ofmotorcycle riding, pool, tennis, darts, and football.)

#### **INTERVIEWER ASK:**

[\*] How much money do you think the 26 year old man in case C should receive to compensate him for things other than his financial loss?

0..99999999

ASK IF: INTRO3 = Readall

#### M209 4

CASE D - 34 YEAR OLD WOMAN - ROAD TRAFFIC ACCIDENT

(A 34 year old woman suffered an injury to her neck in a road traffic accident. She could not drive or work for 2 weeks because of pain and stiffness in her neck. She had regular severe headaches for about 3 weeks, after which they occurred less often. Her symptoms had disappeared 18 months atter her accident, but she has given up keep-fit and is a less confident driver.)

#### **INTERVIEWER ASK:**

[\*] How much money do you think the 34 year old woman in case D should receive to compensate her for things other than her financial loss?

0..99999999

#### ONS Omnibus Survey Module 209 September/November 1998 Compensation

Ask if: INTRO3 = Readall

## M209\_5

Generally, negligent people who cause an injury to someone else do not themselves pay the compensation. Instead it is paid by their insurance company. If the amounts of compensation awarded by the courts change significantly, this is likely to lead to a change in the premiums charged by insurance companies. For example, if awards go up, motor insurance may become more expensive. In other words, in most cases the cost of compensation is met by a wide cross-section of the public rather than by the negligent person who caused the injury.

Does knowing this alter your views about what would be an appropriate amount of compensation for the non-financial consequences of injury?

- (1) Yes
- (2) No
- (3) Don't know / can't say

#### ONS Omnibus Survey Module 209 September/November 1998 Compensation

ASK IF: INTRO3 = Readall AND: Views altered on amount of compensation cases should receive

# M209\_6

By how much would you reduce or increase the suggested awards you have given? Please choose your answer from the card SHOWCARD C209.5

- (1) Reduce by a 1/4
- (2) Reduce by a 1/2
- (3) Reduce to nothing
- (4) Increase by a 1/4
- (5) Increase by a 1/2
- (6) Double
- (7) Other (please specify)
- (8) Don't know/ Can't say

```
